Note:

- The articulation names highlighted in orange represent the default 20-slot Articulation Pad layout. They represent a suggested starting point and can be customized to suit your workflow.
- To maintain a consistent slot layout, the presets intentionally leave articulation slots empty when an articulation is not available for a particular instrument. This allows you to copy and paste automation envelopes between instruments. As a best practice, add any additional articulations starting from slot 21 onward.
- To reduce empty slots and keep the layout compact, closely related articulations are used as substitutes where possible—for example, a vibrato variant or a 5-second version may be used in place of Dyn pFp NV 6s.
